SUMMARY

Full-stack Software Engineer with **2+ years of experience building and scaling production web applications**. Specialized in developing **high-performance React and Next.js frontends & Node.js and GraphQL backend services** within modern microservice architectures. Experienced in delivering **secure, scalable, and maintainable systems** that support **100K+ users**, with a strong focus on performance optimization, clean architecture, & production reliability.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, SQL, HTML, CSS

Frontend: Next.js, React, React Query, React Router, React Native, Tailwind CSS, Material UI (MUI), Chakra UI, React Bootstrap, shadcn/ui, Magic UI, Storybook

Backend: Node.js, Express.js, Spring Boot, Flask, Django, GraphQL, RESTful APIs, Microservices Architecture

Databases: PostgreSQL (Supabase), MongoDB, MySQL, DynamoDB, Aggregation Pipelines

Authentication & Security: JSON Web Tokens (JWT), Clerk, Bcrypt

DevOps & Cloud: AWS, Jenkins, SonarQube, Netlify

ORM & Tools: Prisma, Mongoose, Supabase, WebSockets, Nodemailer

Version Control & Collaboration: Git, GitHub, Bitbucket, Jira, Confluence

Soft Skills: Agile/Scrum, Strong communication, Problem-solving, Teamwork, Adaptability, Attention to detail

EXPERIENCE

Software Engineer

Channel Dynamics

May 2026 – Present

Islamabad, PAK

- Helped ship the **Syndicate Reports MCP server**: investor clients sign in with **OAuth** and query the research they are entitled to from their own **Claude**, with **semantic search over report embeddings**.
- Hardened the client MCPs with **per-client field-level access tiers**, **per-user rate limits**, and audit logs of every call, and moved the **CTO Survey MCP** onto the portal's **OAuth**.
- Built an **AWS S3 Glacier** archive for MCP activity logs with **6-year Object Lock retention**, least-privilege **IAM** (the app can write but never read), and a **GitHub Actions** workflow for permanent deletion.
- Created a **Node.js** email service on **Trigger.dev** for weekly leadership reports: jobs fan out in parallel and **Claude Haiku via the Vercel AI Gateway** writes the account notes and summary.
- Shipped full-stack features in two **Next.js** and **Supabase** portals, including report-delivery authorization, team-level access controls, **OAuth client credentials** for service-to-service APIs, and a mobile-responsive layout.
- Set up **Claude Code agents** (PR reviewer, PR shipper, release engineer, UI/UX tester) and automated releases with **release-please** and **GitHub Actions**, so merging to main ships to production.
- Designed and built **hawthorne-foundation.org** and redesigned **channel-dynamics.com**, including an SEO and performance pass.

Software Engineer

Volmatica

Feb. 2025 – Present

Islamabad, PAK

- Reduced initial page load** time by 40% (e.g., from 3.5s to 1.8s) and boosted Lighthouse performance scores **from 65 to 92** by implementing React code-splitting, lazy loading, and optimized rendering strategies.
- Accelerated feature development cycles by 30% and **reduced frontend code duplication by 20%** by engineering a scalable UI component library utilizing **React**, **Tailwind CSS**, **Chakra UI**, and **shadcn/ui**.
- Developed and integrated **microservices** through **well-defined APIs**, improving **system modularity** and enabling **independent deployment and scaling** of services.
- Improved **developer productivity** by standardizing **API response patterns** and **reusable middleware**, simplifying **debugging** and reducing **development time** for new features.
- Owned **end-to-end delivery of features** from **design to deployment**, collaborating with **product and engineering teams** to translate requirements into **scalable technical solutions**.
- Diagnosed and resolved **production issues** using **structured logging** and **monitoring tools**, reducing **incident resolution time** and improving **system stability**.

- **Reduced redundant API requests by 40%** and decreased server load by 20% by implementing optimized **TanStack Query caching** and state management strategies, significantly improving overall application responsiveness.
- Designed **scalable API schemas** and **data access patterns**, improving **maintainability** and ensuring **consistent data contracts** between **frontend and backend services**.

Associate Software Engineer
Teknotize

Feb. 2024 – Feb. 2025
Islamabad, PAK

- Promoted from **Full Stack Intern** to **Associate Software Engineer** within **3 months**, recognizing **strong delivery, technical ownership**, and ability to **ship production-ready features**.
- Developed **dynamic client-facing dashboards** and **admin panels** using **React**, enabling **business teams** to manage **data, users, and operational workflows** efficiently.
- Implemented **secure user authentication** and **role-based authorization flows** in **Node.js** and **Express**, ensuring **controlled access** to **sensitive application resources**.
- Architected **reusable backend middleware** and **service layers** to standardize **request handling, validation, and error responses** across multiple APIs.
- Designed **RESTful APIs** supporting **complex data retrieval** with **pagination, filtering, and sorting**, improving API usability and enabling **efficient frontend data consumption**.

PROJECTS

Enterprise-Level Student Management Platform | *React, Node.js, GraphQL, AWS Lambda, SQS, S3, DynamoDB*

- Built a full-stack scheduling system for an enterprise tutoring platform, supporting **100K+ students per district** and reducing scheduling errors by **~90%**.
- Designed a scalable **report export pipeline** using cron jobs, S3, and pre-signed URLs, **eliminating API Gateway timeouts** for large datasets.
- Created an admin dashboard with downloadable schedule summaries, **improving operational visibility** and reducing manual verification.
- Implemented validation and consistency checks to **prevent conflicting or duplicate** student assignments.

ProShop PK | *React.js, Node.js, Express.js, MongoDB (MERN Stack)*

- Developed a full-featured **eCommerce platform**, enabling users to browse products, manage carts, and complete secure checkouts seamlessly.
- Implemented **user authentication and profile management**, allowing users to update personal details and passwords to enhance security and account usability.
- Designed a **responsive and intuitive UI/UX**, streamlining the shopping flow and improving user experience, increasing conversion rates by an estimated **20%**.
- Deployed the application on **Render**, ensuring scalable performance and maintaining approximately **99% uptime**.

EDUCATION

Bahria University
Bachelor of Science in Computer Science

Islamabad, PAK
